

TELEPHONES 237AW AND 237CBW.

1. HANDSET TYPE WALL TELEPHONE RECONSTRUCTED, AUTO. AND C.B.

Telephone 237AW and Telephone 237CBW are handset types converted from a wooden C.B. bell box. The serial numbers are 1/22 and 1/21. An illustration of 237AW is shown, and the appearance of 237CBW is similar but the front of the case is without dial or dummy.

2. Drawing C.1514 shows the wiring of both the C.B. and Automatic telephone and a copy is fixed inside the instrument. The C.B. instrument is not convertible to automatic and will be changed if the service is to become automatic. Experience has shown that the extra cost of making all instruments in "convertible" form is not always warranted and many are never converted. In the present case, the plain front is being retained.

3. This telephone has all the advantages in quality and volume of transmission and reception provided in the latest types of handset table instruments.

4. When stocks are available, these instruments will be issued for all wall type handsets in C.B. and Automatic areas. The use of table telephones mounted on brackets (162AT and CBT, 232AT and CBT and 332AT and CBT on brackets) will be discontinued as soon as possible.

END.
