

# Extension Arrangements Plans 1 and 1A

DESCRIPTIVE  
DLA 100

EXTENSION  
ARRANGEMENTS AND  
PRESS-BUTTON SYSTEMS

These extension arrangements are a simple means of providing additional telephones on one line. They do not provide intercommunication between the telephones, but with plan 1 it is possible to transfer a call to an extension. These plans enable a group of people in an office to share one line when their use of a telephone individually is not heavy.

## PLAN 1

## FACILITIES

Up to five internal extensions can be added to the main telephone.

Incoming calls are received at the main telephone but can be answered by any extension. Only the main bell rings.

The main telephone can call any of the extensions by press-button, and can talk to the extension while an exchange call is in progress; that extension can take over the call, the receiver on the main telephone being replaced without cutting off the call. The conversation between the main and extension telephones can be heard by the exchange-line caller.

All telephones can call the exchange direct.

Certain combinations of this arrangement with plans 1A and 4 are possible.

## GENERAL INFORMATION

The photograph shows the ordinary type of telephone (left) side by side with the modern telephone. The arrangement can be provided using all ordinary telephones or all modern telephones and the two types cannot be mixed. When modern telephones are used the main instrument can be black, two-tone grey, or ivory; the extension instruments can be provided in the full range of colours (see General Information leaflet DLX 1 or modern telephone leaflet).

## PLAN 1A

## FACILITIES

Up to five extensions, internal or external, can normally be added to the main telephone.

In exceptional circumstances more than five telephones can be added. The main telephone and up to five extension telephones can usually have bells, but on certain types of public exchange the number of bells which can be provided is restricted to two.

The bell in any extension may be cut off at will, by a switch on the telephone.

Incoming calls can be answered at any telephone.

All telephones call the exchange direct.

Certain combinations of this arrangement with plans 1 and 4 are possible.

## GENERAL INFORMATION

The arrangement can be provided using all ordinary telephones or all modern telephones and the two types cannot be mixed. When modern telephones are used on an exclusive line, both main and extension instruments are available in the full range of colours. When used on a shared service line, the main telephone can be provided in the full range of colours but the extension telephones are available only in black, two-tone grey, and ivory.

**Rental and connexion charges  
are quoted in the preface sheet**

**THE TELEPHONE MANAGER  
WILL GLADLY SUPPLY  
ANY FURTHER INFORMATION**
