## A TRUE BREAKTHROUGH IN BUSINESS COMMUNICATIONS

*The Rhapsody Planset is a breakthrough in modern manager/secretary communications. A telephone system which is so simple to use, and yet so effective, that it can transform the way in which two people work together in a manner which has not previously been possible since the introduction of the electronic PABX.*

*And yet it is an inexpensive system, more cost effective than its electro-mechanical predecessors, because it provides three systems in one.*

calls, Plan 105 and 107 have many advantages:

- Easy Interception
- Simple Transfer
- Discreet Intercom
- Secretary's Awareness that Manager's Line was Busy
- Buzzer
- Single Key Intercom.

*It was efficient and, at the time, the only solution to a common need.*

### A COMPLETE PLAN 107 REPLACEMENT

*It is the first true replacement for both the Plan 105 and Plan 107 systems of the electro-mechanical age. A product which not only updates those ubiquitous manager/secretary systems, but which offers additional features, increasing the efficiency of an already highly successful system.*

*For the manager who wishes his or her secretary to intercept and screen their*

*With the advent of the electronic exchange offering access to all the features of the modern PABX, many felt that the Plan 107 had had its day. They were wrong. Although the PABX did offer access to such features as intercept and call transfer, it was sadly lacking in its ability to provide many of the vital features of the Plan 107*

### A FEATURE-RICH SYSTEM

*The Ferranti GTE Rhapsody Planset restores these features and in addition to all the features associated with the Plan 107 the Rhapsody Planset offers an impressive list of its own including:*

- 99 Number Memory
- Last Number Redial
- Saved Number Redial
- Internal Paging
- Single Button Intercom
- Urgent Call Signal
- Conference
- Brokerage

And that's not all. The Rhapsody Planset is feature transparent, which means that it can offer all of the additional benefits of the host PABX Benefits which may include: Camp-On, Abbreviated Dialling and complete access to the total PABX network.

### A FLEXIBLE SYSTEM

Developed from the company's successful Rhapsody 3/6, it offers three Plan 107 replacements in a single unit — with three incoming lines and three

pairs of extensions. And that's not all. The Rhapsody Planset isn't just a perfect one-to-one system, but can also be used by one secretary serving two managers, either permanently or to cover for short-term absence. The Rhapsody Planset can be configured to suit your particular needs. For example, a direct exchange line to the manager may be required, or it may be desirable for the secretary to have a separate link to the PABX. Both these options and many more are easily catered for within the flexible programming capability of the Rhapsody Planset. Flexibility of software within the Rhapsody Planset will enable it to interface with almost any modern PABX and many of the old manual exchanges. And it is a remarkably cost-effective system which effectively gives you 6 new extensions on your PABX for the cost of only 3.

### A SOPHISTICATED SYSTEM

Each Rhapsody Planset comes as a complete system, ready for connection to your existing PABX, and the hardware of

the Rhapsody Planset is as impressive as its software. Elegantly styled with its modern, sophisticated lines, the Rhapsody key telephone will enhance any office environment.

Each secretary uses the Rhapsody Busy Lamp Field telephone, which provides full line status for all three sub-systems within the Planset. Each executive has the matching Rhapsody key telephone as standard, with the option of the advanced Rhapsody Speakerphone should they prefer the additional benefit of hands-free operation.

## TECHNICAL SPECIFICATIONS RHAPSODY PLANSET

### Maximum Configuration

Exchange Lines 3      Extensions 6

### Dimensions      Central Control Units
