

PLAN 4

Plan 4 consists of a plug-in telephone, two sockets and a separate main magneto bell. Further plug-in telephones and sockets may be provided as required.

The telephone(s) may be moved from socket to socket as required but not whilst a call is in progress.

Incoming calls ring the main bell and the bell of any telephone plugged into a socket.

Calls can be made or received at any socket.

Neither secrecy nor intercommunication between telephones is provided.

The plugs and sockets are available in grey and ivory. The main bell cover is available in black, grey or ivory, and a customer may select the colour which best complements the local surroundings.

Where the number of telephones required, plus the main bell, exceeds the permitted number of bells the bells in some telephones can be rendered permanently inoperative (by the Engineering Division) and separate bells fitted, up to the permitted number, so that incoming calls can be heard at all points.

* When fitted on extensions of cordless PMBXs 2 + 6, 3 + 12, 4 + 18 and 5 + 25, Plan 4 must be terminated as a 2-wire extension, using a conversion unit.
